

# GLOBAL URANIUM CONFERENCE

## Post-conference thoughts, notes, and updates

On April 3, 2014, Cantor Fitzgerald held a Global Uranium Conference in New York featuring the best line-up of uranium-focused companies ever assembled for an investor-oriented conference. Held at our global headquarters in New York, presenters of the event included the following:

### Global Producers:

Cameco Corp (CCO-TSX, CCJ-NYSE; BUY; Target: C\$32.70)  
Paladin Energy (PDN-TSX, PDN-ASX; Not Rated)

### U.S. Domestic Producers:

Energy Fuels (EFR-TSX, UUUU-NYSE; BUY; Target: C\$13.35)  
Ur-Energy (URE-TSX, URG-NYSE; BUY; Target: C\$2.85)  
Uranium Energy Corp (UEC-NYSE; BUY; Target: \$2.10)

### Imminent Producer:

Uranerz Energy (URZ-TSX, URZ-NYSE; BUY; Target C\$2.10)

### Notable Exploration:

Denison Mines (DML-TSX, DNN-NYSE; BUY Speculative; Target: C\$2.10)  
Fission Uranium (FCU-TSXV; BUY Speculative)  
NexGen Energy (NXE-TSXV; Not Rated)

### Commodity-only:

Uranium Participation Corp (U-TSX; BUY; Target: C\$6.35)

### Market Insights:

Fletcher Newton of New World Consulting

Company	Ticker	Price	Recommendation	Target	Market-Cap
Uranium Participation Corp.	U-T	C\$5.51	BUY	C\$6.35	C\$655M
Energy Fuels	EFR-T/UUUU-NYSE	C\$9.36	BUY	C\$13.35	C\$166M
Ur-Energy	URE-T/URG-NYSE	C\$1.62	BUY	C\$2.85	C\$198M

## Takeaways

***It's still early*** – Despite the recent strength in the uranium sector, many investors are still just starting to do their work on the space. We would classify the crowd as split 70/30 in terms of those investors who are getting up to speed on the space versus those with a deep knowledge/experience in investing in the uranium sector.

***Incentive price for uranium much higher than here*** – Several uranium producers and developers mentioned that the minimum incentive price for production expansion decisions is at \$70/lb. and higher. This is production that is necessary to come online for future supply to meet future demand.

***China may have higher demand for nuclear than it is telling us*** – Industry expert Fletcher Newton noted that the Chinese may have significantly more demand than it is telling the rest of the world since it has little incentive to do so as it would only drive up its input costs such as the price of uranium. He further cites an independent study that identifies nuclear power as the most cost effective means of providing electricity to the Chinese coastal cities, which are the primary area of growth for China.

***Kazakhstan may be done growing*** – Mr. Newton also points out that Kazakhstan is unlikely to continue its incredible rate of uranium production growth – in fact, it may have already peaked. He posits that it requires 2.5 billion kilograms of sulphuric acid to produce last year's Kazakh output of 58.5M lbs. of  $U_3O_8$ . Kazakh law prohibits acid storage volume at the mine site to about a few weeks' worth at a time and a typical truckload of acid carries 20,000 kg per load. Therefore, about 337 trucks full of acid are transported throughout Kazakhstan to various mine sites on a daily basis. This is both costly, a logistical challenge, and dangerous. He believes that it is unlikely that this figure can be increased notably. Based on this, we believe that uranium output in Kazakhstan may be one road incident away from being severely impacted.

***Underfeeding is not a two-way street*** – Mr. Newton further pointed out that secondary supplies are likely being overestimated and he points to the underfeeding issue as an example. As centrifuges have the choice between using more  $U_3O_8$  to create Enriched Uranium Product ("EUP") or to spin a lesser amount of  $U_3O_8$  longer to create the same amount of EUP, the current overcapacity scenario has enrichers choosing the latter option and reselling the "excess" amount of  $U_3O_8$  back into the market (source of secondary supply). The tails or waste from this process is also viewed as a potential source of supply as it can be reprocessed to harvest the residual  $U_3O_8$ . Mr. Newton argues that since enrichers are currently choosing to spin a lesser amount of  $U_3O_8$  longer to accomplish its objectives, the available  $U_3O_8$  in these tails have been reduced to an amount that cannot be economically harvested – even though some analysts and industry groups are including these tails as potential sources of secondary supply.

***Domestic security of supply was and will likely once again be at a premium*** – It was mentioned by several presenters that domestic security of supply in the United States will be an important issue as the 24M lbs. of annual  $U_3O_8$  supply from the now expired Highly Enriched Uranium agreement is gone. With the U.S. consuming about 50M lbs. of  $U_3O_8$  annually and domestic producers producing less than 5M lbs. annually, there is a significant amount that needs to be sourced outside of U.S. borders. With U.S.-Russian relations at a low, uranium from Russian-controlled or influenced sources may be at risk (Kazakhstan, Africa, etc.).

***Synchronized demand by utilities may cause a big push*** – It was highlighted by Ur-Energy's Jeff Klenda that due to the way long-term contracts have been negotiated over the past few years, utilities now find themselves in the unusual position of having their demand profiles synced. A significant number of utilities have uncovered

uranium requirements beginning in 2016 – meaning that there will be more participants than normal vying for uranium contracts over the next twenty months.

***Low volume of contracting activity due to stalemate*** – Cameco’s Rachelle Girard commented that there is low volume in contracting activity in the uranium space due to a stalemate occurring between producers and utilities. Something has to give and since uranium prices have declined significantly over the years to the point where the spot price sits in the mid-\$30s and below the global marginal cost of production of \$40/lb., we believe the producers have pretty much “given” as much as they can and that the next step is for utilities to start buying – especially since the low price environment has limited future production to the point where we see an unavoidable supply deficit coming by 2019.

Company-specific conference highlights listed below in the order of presentation. Please note we do not include comments for Paladin Energy or NexGen Energy as these are not under current coverage.

# CANTOR FITZGERALD'S URANIUM CONFERENCE

Thursday, April 3, 2014 | Cantor Fitzgerald

## Presentation Schedule

8:00am - 8:50am	Breakfast and Registration
8:50am - 9:00am	Opening Remarks (Laurence Rose, <i>CEO Cantor Fitzgerald Canada Corporation</i> and Rob Chang, <i>Cantor Fitzgerald Canada Metals and Mining Analyst</i> )
9:00am - 9:30am	Uranium Participation Corp (Ron F. Hochstein, <i>President and CEO</i> )
9:30am - 10:00am	Paladin Energy (Dustin Garrow, <i>Executive General Manager - Marketing</i> )
10:00am - 10:30am	Energy Fuels (Stephen P. Antony, <i>President and CEO</i> )
10:30am - 10:45am	Coffee Break
10:45am - 11:15am	Ur-Energy (Jeff Klenda, <i>Chairman and Executive Director</i> )
11:15am - 11:45am	Uranium Energy Corp (Bruce J. Nicholson, <i>Vice President Corporate Development</i> )
11:45am - 12:15pm	Uranerz Energy (Dennis Higgs, <i>Executive Chairman and Director</i> )
12:15pm - 1:00pm	Lunch
1:00pm - 1:30pm	Fission Uranium (Dev Randhawa, <i>Chairman and CEO</i> )
1:30pm - 2:00pm	NexGen Energy (Leigh R. Curyer, <i>CEO and Director</i> )
2:00pm - 2:30pm	Denison Mines (Ron F. Hochstein, <i>President and CEO</i> )
2:30pm - 2:45pm	Coffee Break
2:45pm - 3:15pm	Cameco Corporation (Rachelle Girard, <i>Director, Investor Relations</i> )
3:15pm - 3:45pm	New World Consulting (Fletcher Newton, <i>Principal</i> )

Please note that all companies are available for one-on-ones.  
For more information, please contact [conf-clients@cantor.com](mailto:conf-clients@cantor.com).

# URANIUM PARTICIPATION CORPORATION

## Updated NAV and Conference Notes

### EVENT

Uranium Participation Corporation reported its estimated NAVPS of \$4.97 as at March 31, 2014. The company also presented at Cantor Fitzgerald's Global Uranium Conference.

### BOTTOM LINE

The market is trading UPC at a price equivalent to a 9.7% premium relative to its current fair value. We note that given the post-Fukushima trading average of an 8% discount, the current trading premium indicates that investor sentiment towards uranium continues to be positive and is in-line with our view that the market is pricing in higher expected uranium prices into the value of the portfolio.

We are maintaining our Buy recommendation and are increasing our target price to \$6.35/share to reflect its NAV.

### FOCUS POINTS

- **Near highest premium since 2008** – At a 9.7% premium to NAV as of Monday's close, the trading price to NAV for UPC remains at a near 6-year high. Last month's 12.6% premium remains the high benchmark.
- **Above historical average** – UPC has historically traded at par on average since its inception in 2006. In the post-Fukushima world, it traded at an 8% discount on average. Its current strength may be a sign of increased confidence in uranium pricing.
- **Market implying a higher spot price** – Based on UPC's last traded price of \$5.51/lb, the market is implying a \$41.04/lb spot price that is above the most recently quoted U<sub>3</sub>O<sub>8</sub> price of US\$33.50/lb.
- **Conference Highlights** – UF<sub>6</sub> portfolio to be sold down, as well as other items listed below.

### Recommendation:

### BUY

Symbol/Exchange: U/TSX, URPTF/OTC  
Sector: Metals and Mining  
*All dollar values in C\$ unless otherwise noted.*  
Current price \$5.51  
One year target: \$6.35  
Return target 15%  
Market Capitalization \$655M

### Company Summary

Shares O/S (M)	116.9	52-week range	\$4.71 - 5.91	
Market cap (\$M)	\$644.0	Avg. weekly vol. (000)	2.136

**Sales/Trading — Toronto:** (416) 363-5757, (866) 442-4485

See disclosure and a description of our recommendation structure at the end of this report.

### THE MARCH 31 2014 UPC NET ASSET VALUE

Based on the current  $U_3O_8$  and  $UF_6$  spot prices of US\$33.50/lb. and US\$99.00/KgU, respectively, and factoring in a current \$USD/\$CAD exchange rate of 1.098, the current fair value for UPC totals \$5.02/share. We note that UPC is currently trading at a 9.7% premium to its fair value.

#### Exhibit 1. UPC Current NAV based on current $U_3O_8$ and $UF_6$ prices

Fair value based on current $U_3O_8$ and $UF_6$ Price						
	Units	Quantity	Cost	Market Price USD	Market Price CAD	Market Value CAD
<b>U3O8</b>	lb	8,076,811	376,859	\$33.50	\$36.76	296,863
<b>UF6</b>	kg	2,153,471	353,357	\$99.00	\$108.62	233,909
			730,216			530,772
Net Working Capital						56,105
NAV						586,877
NAVPS						\$5.02

Source: Cantor Fitzgerald Estimates, Uranium Participation Corp.

Since May 2006, UPC has historically traded at its NAVPS on average. It has traded at a high of a 42% premium (Oct 2007) and a low of a 25% discount (May 2012).

Post-Fukushima, UPC has traded at an average discount of 8% with a monthly high of 12.6% premium (last month) and an aforementioned low of a 25% discount.

As the sentiment towards uranium improves, we expect UPC to continue to trade above its NAV as investors forecast a higher  $U_3O_8$  spot price into the value of UPC's portfolio. As can be seen below, excluding last month's 12.6% premium, UPC's current 9.7% premium to NAV remains as one of the highest points since June of 2008.

#### Exhibit 2. Market Price Premium / Discount to NAV Analysis

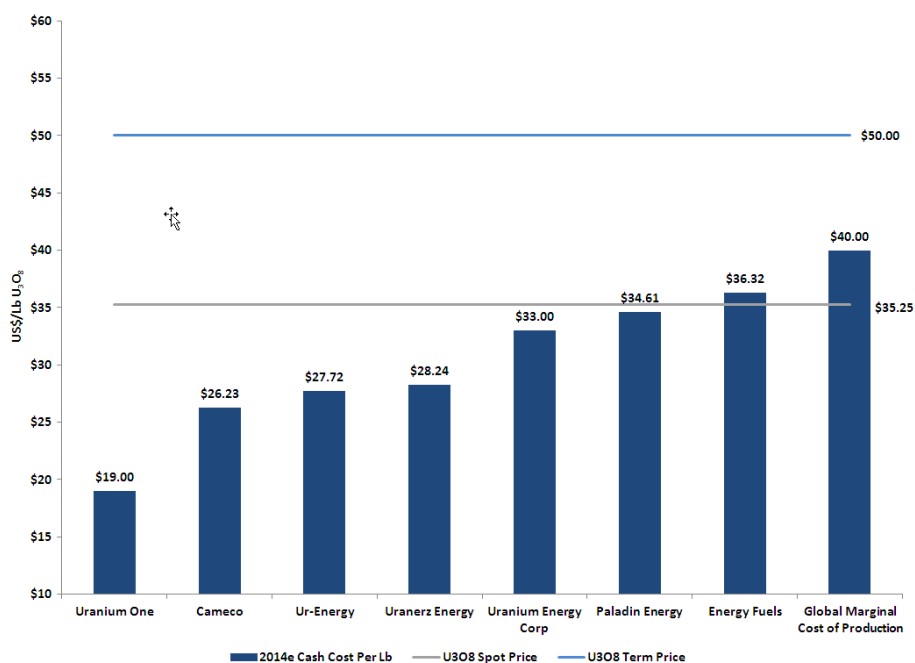

Source: Cantor Fitzgerald Canada Research

### MARKET IMPLYING \$41.04/LB U<sub>3</sub>O<sub>8</sub>

Based on Monday's closing price of \$5.51 per share, we calculate that the market is currently implying a spot U<sub>3</sub>O<sub>8</sub> price of \$41.04 per lb. This market implication is 23.0% above the current spot price as reported by UxC of \$33.50 per lb. It is also 5.0% below our 2014 forecast U<sub>3</sub>O<sub>8</sub> price of \$43.25 per pound. Note that we view \$40 per pound as the marginal cost for uranium production.

## CONFERENCE NOTES

During our conference, Ron Hochstein, UPC's President, mentioned that the company will be looking to sell down its inventory of UF<sub>6</sub>. Though no timetable has been given on that transaction, note that the company currently has 2.153M KgU of uranium hexafluoride (UF<sub>6</sub>) in inventory. Moreover, it was also mentioned that despite still being in the market for additional uranium purchases (UPC is currently only 65% done buying), the current Board is looking at possibilities to strategically sell as well. Note that since the last NAV update, the uranium oxide (U<sub>3</sub>O<sub>8</sub>) in inventory has increased by 250,000 lbs.

When pressed for details on potential uranium sales, Mr. Hochstein noted that the Board consideration of sales is proactive and does not indicate any intention to sell at the current time. The topic of discussing uranium sales appeared more to be in preparation for the need to do so in the future for UPC rather than indicative of a change in management's view. It should be noted that UPC has never sold uranium from its portfolio.

## UPC INVENTORY OUTPERFORMS THE SHARE PRICE

The fair value of the inventory decreased by 4.0% compared to the previous NAV update for the end of February. UPC's reported NAV decreased from \$5.16 per share to the current \$4.97 per share, while its share price decreased by 4.8% from \$5.79 per share to the current \$5.51 in the same monthly timeframe.

### Exhibit 4. UPC physical inventory outperforms the share price

Source: Cantor Fitzgerald Canada Research

## VALUATION

We are maintaining our Buy recommendation but are maintaining our target price of \$6.35/share to reflect our updated NAV.

With a last close share price of \$5.51, we see 15% upside to our target of \$6.35 per share. Our target is based on our rolling four quarter U<sub>3</sub>O<sub>8</sub> forecast of

\$43.25/lb and UF<sub>6</sub> forecast of \$129.75/KgU, which calculates a valuation of \$6.38 per share (see Exhibit 5).

## DISCLAIMERS AND DISCLOSURES

### Disclaimers

The opinions, estimates and projections contained in this report are those of Cantor Fitzgerald Inc. ("Cantor") as of the date hereof and are subject to change without notice. Cantor makes every effort to ensure that the contents have been compiled or derived from sources believed to be reliable and that contain information and opinions that are accurate and complete; however, Cantor makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions which may be contained herein and accepts no liability whatsoever for any loss arising from any use of or reliance on this report or its contents. Information may be available to Cantor that is not herein.

This report is provided, for informational purposes only, to institutional investor clients of Cantor Fitzgerald Inc. Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This report is issued and approved for distribution in Canada, Cantor Fitzgerald Inc., a member of the Investment Industry Regulatory Organization of Canada ("IIROC"), the Toronto Stock Exchange, the TSX Venture Exchange and the CIPF. This report is has not been reviewed or approved by Cantor Fitzgerald USA., a member of FINRA. This report is intended for distribution in the United States only to Major Institutional Investors (as such term is defined in SEC 15a-6 and Section 15 of the Securities Exchange Act of 1934, as amended) and is not intended for the use of any person or entity that is not a major institutional investor. Major Institutional Investors receiving this report should effect transactions in securities discussed in the report through Cantor Fitzgerald USA.

**Non US Broker Dealer 15a-6 disclosure:** This report is being distributed by (CF Canada/CF Europe/CF Hong Kong) in the United States and is intended for distribution in the United States solely to "major U.S. institutional investors" (as such term is defined in Rule 15a-6 of the U.S. Securities Exchange Act of 1934 and applicable interpretations relating thereto) and is not intended for the use of any person or entity that is not a major institutional investor. This material is intended solely for institutional investors and investors who Cantor reasonably believes are institutional investors. It is prohibited for distribution to non-institutional clients including retail clients, private clients and individual investors. Major Institutional Investors receiving this report should effect transactions in securities discussed in this report through Cantor Fitzgerald & Co. This report has been prepared in whole or in part by research analysts employed by non-US affiliates of Cantor Fitzgerald & Co that are not registered as broker-dealers in the United States. These non-US research analysts are not registered as associated persons of Cantor Fitzgerald & Co. and are not licensed or qualified as research analysts with FINRA or any other US regulatory authority and, accordingly, may not be subject (among other things) to FINRA's restrictions regarding communications by a research analyst with a subject company, public appearances by research analysts, and trading securities held by a research analyst account.

### Potential conflicts of interest

The author of this report is compensated based in part on the overall revenues of Cantor, a portion of which are generated by investment banking activities. Cantor may have had, or seek to have, an investment banking relationship with companies mentioned in this report. Cantor and/or its officers, directors and employees may from time to time acquire, hold or sell securities mentioned herein as principal or agent. Although Cantor makes every effort possible to avoid conflicts of interest, readers should assume that a conflict might exist, and therefore not rely solely on this report when evaluating whether or not to buy or sell the securities of subject companies.

### Disclosures as of April 8, 2014

Cantor *has* provided investment banking services or received investment banking related compensation from Uranium Participation Corp. within the past 12 months.

The analysts responsible for this research report *do not have*, either directly or indirectly, a long or short position in the shares or options of Uranium Participation Corp.

The analyst responsible for this report *has* visited the material operations of Uranium Participation Corp. No payment or reimbursement was received for the related travel costs.

### Analyst certification

The research analyst whose name appears on this report hereby certifies that the opinions and recommendations expressed herein accurately reflect his personal views about the securities, issuers or industries discussed herein.

### Definitions of recommendations

**BUY:** The stock is attractively priced relative to the company's fundamentals and we expect it to appreciate significantly from the current price over the next 6 to 12 months.

**BUY (Speculative):** The stock is attractively priced relative to the company's fundamentals, however investment in the security carries a higher degree of risk.

**HOLD:** The stock is fairly valued, lacks a near term catalyst, or its execution risk is such that we expect it to trade within a narrow range of the current price in the next 6 to 12 months. The longer term fundamental value of the company may be materially higher, but certain milestones/catalysts have yet to be fully realized.

**SELL:** The stock is overpriced relative to the company's fundamentals, and we expect it to decline from the current price over the next 6 to 12 months.

**TENDER:** We believe the offer price by the acquirer is fair and thus recommend investors tender their shares to the offer.

**UNDER REVIEW:** We are temporarily placing our recommendation under review until further information is disclosed.

## ENERGY FUELS INC.

### Year end 2013 results announced; Conference notes

#### EVENT

Along with providing us with an operational update, last week Energy Fuels announced its financial results for the 15-months ended 2013. It also presented at the conference.

#### BOTTOM LINE

Operational highlights for the 15-month period ending 2013 include production at the White Mesa mill of 1.235M lbs.  $U_3O_8$  from both conventional and alternate feed. The mill also produced 1.537m lbs. of vanadium ( $V_2O_5$ ). Revenues for the period totaled \$73.3M. We are reiterating our Buy recommendation and maintaining our target price at \$10.35/share

#### FOCUS POINTS

- **Earnings** – Earnings for the 15-month period ending 2013 totaled a loss of \$87.3M (\$5.61/share) on revenues of \$73.3M. Note that in the quarter ended September 2013, an impairment loss of \$60.3M was recognized on property, plant and equipment.
- **Favourable average realized price** – On production of 1.235M lbs  $U_3O_8$ , a total of 956,668 lbs were sold at an average realized price of \$56.47/lb. Year-end inventory totaled 452,000 lbs.
- **Reporting calendar** – Note that the company has also announced that its reporting calendar will be changed so that the fiscal year end will be moved from September 30, to December 31.
- **FY 2014 guidance** – Energy Fuels expects FY 2014 sales of approximately 800,000 lbs  $U_3O_8$  (300,000 lbs contracted, 500,000 produced), to be sold into three existing long term contracts. The average expected realized price will remain favourable at an expected \$58.42/lb.

#### Recommendation:

#### BUY

Symbol/Exchange: EFR/TSX; UUUU/NYSE  
Sector: Metals & Mining  
*All dollar values in US\$ unless otherwise noted.*  
Current price: \$9.36  
One-year target: \$13.35  
Target return: 43%

See disclosure and a description of our recommendation structure at the end of this report.

## CONFERENCE NOTES

Energy Fuels continues to position itself to realize economic benefits of anticipated improvements in the price of U<sub>3</sub>O<sub>8</sub>, through select development and permitting expenditures along with care & maintenance initiatives. As of December 31, 2013, EFR held 452,000 lbs of U<sub>3</sub>O<sub>8</sub> in inventory. The current long-term supply contracts in place will equate to an average realized price of \$58.42/lb for FY2014. This term pricing represents a 72% premium over the current spot price of \$33.88/lb.

Note that EFR has contracted to purchase U<sub>3</sub>O<sub>8</sub> in the spot market for one of the contracts, which along with current inventories and scheduled production (500,000 lbs anticipated), provides the company with operational flexibility to meet its contracted delivery requirements for 2014 and beyond. Given the current inventory and contracted spot purchases, the company will be able to place its Pinenut mine on stand-by in July 2014 and production at its White Mesa mill on standby beginning in August 2014. Note however that while on standby, the company will continue to accept alternate feed materials and maintain the White Mesa mill on a state of readiness in order to be able to restart mineral processing activities when a production decision is made.

During FY 2014, the company expects permitting activities to total approximately \$1.5M, primarily at the Sheep Mountain, Roca Honda and Henry mountains projects.

## VALUATION

We reiterate our BUY recommendation on Energy Fuels and maintain our C\$13.35 per share target price. Our target price reflects a 1.0× multiple to the company's net asset value

### Exhibit 1. Net asset value

Projects	Energy Fuels		Comment
	NAV \$000s	Per Share	
White Mesa Mill and EFR's Uranium Mines/Projects	192,362	\$11.31	2014 DCF @ 10% Discount Rate
Virginia Energy (VUI-TSXV) 16.5%	755	\$0.05	80% of the market value for conservatism
Mega Uranium (MGA-TSX)	378	\$0.02	80% of the market value for conservatism
Cash	6,600	\$0.40	Cash + Recent Financing
Working Capital (Net of Cash)	25,896	\$1.58	As of most recent quarter
<b>Total</b>	<b>225,991</b>	<b>\$13.36</b>

Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This report is issued and approved for distribution in Canada, Cantor Fitzgerald Inc., a member of the Investment Industry Regulatory Organization of Canada ("IIROC"), the Toronto Stock Exchange, the TSX Venture Exchange and the CIPF. This report is has not been reviewed or approved by Cantor Fitzgerald USA., a member of FINRA. This report is intended for distribution in the United States only to Major Institutional Investors (as such term is defined in SEC 15a-6 and Section 15 of the Securities Exchange Act of 1934, as amended) and is not intended for the use of any person or entity that is not a major institutional investor. Major Institutional Investors receiving this report should effect transactions in securities discussed in the report through Cantor Fitzgerald USA.

**Non US Broker Dealer 15a-6 disclosure:** This report is being distributed by (CF Canada/CF Europe/CF Hong Kong) in the United States and is intended for distribution in the United States solely to "major U.S. institutional investors" (as such term is defined in Rule 15a-6 of the U.S. Securities Exchange Act of 1934 and applicable interpretations relating thereto) and is not intended for the use of any person or entity that is not a major institutional investor. This material is intended solely for institutional investors and investors who Cantor reasonably believes are institutional investors. It is prohibited for distribution to non-institutional clients including retail clients, private clients and individual investors. Major Institutional Investors receiving this report should effect transactions in securities discussed in this report through Cantor Fitzgerald & Co. This report has been prepared in whole or in part by research analysts employed by non-US affiliates of Cantor Fitzgerald & Co that are not registered as broker-dealers in the United States. These non-US research analysts are not registered as associated persons of Cantor Fitzgerald & Co. and are not licensed or qualified as research analysts with FINRA or any other US regulatory authority and, accordingly, may not be subject (among other things) to FINRA's restrictions regarding communications by a research analyst with a subject company, public appearances by research analysts, and trading securities held by a research analyst account.

### Potential conflicts of interest

The author of this report is compensated based in part on the overall revenues of Cantor, a portion of which are generated by investment banking activities. Cantor may have had, or seek to have, an investment banking relationship with companies mentioned in this report. Cantor and/or its officers, directors and employees may from time to time acquire, hold or sell securities mentioned herein as principal or agent. Although Cantor makes every effort possible to avoid conflicts of interest, readers should assume that a conflict might exist, and therefore not rely solely on this report when evaluating whether or not to buy or sell the securities of subject companies.

### Disclosures as of April 8, 2014

Cantor *has* provided investment banking services or received investment banking related compensation from Energy Fuels Inc. within the past 12 months.

The analysts responsible for this research report *have*, either directly or indirectly, a long or short position in the shares or options of Energy Fuels Inc.

The analyst responsible for this report *has* visited the material operations of Energy Fuels Inc. No payment or reimbursement was received for the related travel costs.

### Analyst certification

The research analyst whose name appears on this report hereby certifies that the opinions and recommendations expressed herein accurately reflect his personal views about the securities, issuers or industries discussed herein.

### Definitions of recommendations

**BUY:** The stock is attractively priced relative to the company's fundamentals and we expect it to appreciate significantly from the current price over the next 6 to 12 months.

**BUY (Speculative):** The stock is attractively priced relative to the company's fundamentals, however investment in the security carries a higher degree of risk.

**HOLD:** The stock is fairly valued, lacks a near term catalyst, or its execution risk is such that we expect it to trade within a narrow range of the current price in the next 6 to 12 months. The longer term fundamental value of the company may be materially higher, but certain milestones/catalysts have yet to be fully realized.

**SELL:** The stock is overpriced relative to the company's fundamentals, and we expect it to decline from the current price over the next 6 to 12 months.

**TENDER:** We believe the offer price by the acquirer is fair and thus recommend investors tender their shares to the offer.

**UNDER REVIEW:** We are temporarily placing our recommendation under review until further information is disclosed.

## UR-ENERGY

**Guiding to 1M lbs. production; Pathfinder resource may surprise; Conference notes**

### CONFERENCE HIGHLIGHT

Ur-Energy re-iterated its FY outlook for production at Lost Creek and announced a timetable for Pathfinder resource inclusion.

### DETAILS

Ur-Energy's management re-iterated FY2014 production guidance of approximately 1M lbs. U<sub>3</sub>O<sub>8</sub>. Moreover, an initial resource for the recently acquired Pathfinder assets should be announced later this year. We maintain our BUY rating and our target price of \$2.85 per share.

### FOCUS POINTS

- **Guidance for 1M lbs per year** – Given the 2013 year end flow rates, management has re-iterated guidance for approximately 1M lbs of production for FY 2014.
- **Pathfinder assets next in cue** – The recently acquired Shirley Basin and Lucky Mc properties will have a NI43-101 compliant resource published before the end of the year (currently there is only a 14.7M lb historic resource). Note that the assets can surprise on the upside seeing as the grades are four times higher than those at Lost Creek, while the deposit is shallower. Shirley Basin, the next production area, will require approximately \$30-\$35M to get up and running.
- **Current term contracts well priced** – Ur-Energy currently has six long term contracts focused on U.S. delivery for between 2013-2019. All contract prices are in excess of \$60.00/lb.

### Recommendation:

See disclosure and a description of our recommendation structure at the end of this report.

## CONFERENCE NOTES

2013 was a milestone year for Ur-Energy as the company graduated into the ranks of a uranium producer. Plant construction at Lost Creek was completed and initial production was achieved in August. By September, the daily recovery rate surpassed 2,200 lbs of U<sub>3</sub>O<sub>8</sub> at a flow rate of 1,800 gallons per minute. Production head grades exceeded technical projections reaching levels of 200 mg/l U<sub>3</sub>O<sub>8</sub> in October. Given that fact, flow rates were intentionally reduced to effectively manage production rates while the new plant and water management systems were being commissioned. By the end of 2013, all plant production circuits were operating and the daily recovery rate was 2,700 lbs of U<sub>3</sub>O<sub>8</sub> at a flow rate of 830 gallons per minute with a grade of 270 mg/l U<sub>3</sub>O<sub>8</sub>.

During 2013, a total of 190,365 lbs of U<sub>3</sub>O<sub>8</sub> was captured within the Lost Creek plant. Of those, 131,216 pounds were packaged in drums and 94,827 pounds of the drummed inventory were shipped to the conversion facility. A total of 90,000 lbs were sold to customers under long term sales agreements in the latter part of December 2013.

Management is guiding for full year 2014 production of approximately 1M lbs. Note that the company currently has six long term contracts focused on U.S. delivery between years 2013-2019.

The Pathfinder Mines assets (Shirley Basin & Lucky Mc) were acquired (for a reduced purchase price of \$6.65M) in mid 2012 from AREVA. Work towards a NI43-101 compliant resource will be released later in 2014, permitting activities will commence in 2014 as well. Both properties currently only have a historic resource estimate (14.7M lbs).

Note that the Shirley Basin property is on permitted and licensed land which will be amended for ISR conversion. A confirmation drill program will have results ready for release in May. Note that on this property, grades are four times higher than those at Lost Creek, and the deposit is shallower. \$30-\$35M will be the approximate cost to bring Shirley Basin into production. Q1/14 results are due at the end of April.

## VALUATION

We have maintained our BUY rating and our target price of \$2.85 per share. Our target is derived by applying a 1.0× multiple to the company wide net asset value of \$2.86 per share.

# URANIUM ENERGY CORP.

Conference notes: Reduced production as operational readiness is maintained

## CONFERENCE HIGHLIGHT

Uranium Energy Corp. has reiterated its current strategy of reduced production while maintaining its operational readiness in order to capitalize in an increase in uranium pricing. Project updates were also given.

## DETAILS

For the time being, in light of the weak uranium pricing environment, UEC has decided to have reduced uranium extraction from Production Units 1, 2 & 3 at Palangana and focus instead on maintaining operational readiness to ramp up output in anticipation of a recovery in uranium spot prices. Updates from Goliad and Burke Hollow were also announced. We maintain our BUY recommendation and our \$2.10 per share target price. Our target price reflects a 1.0x multiple to our NAV valuation.

## FOCUS POINTS

- Pipeline projects** – Goliad remains the focus for next in line production. It is currently fully permitted and financed. Construction is underway. At Burke Hollow, initial drilling has been completed and the current mineral resource stands at 2.9m lbs. inferred at an ISR grade of 0.047%. Approximately 70% of the 17,500 acre property remains un-explored. Additional exploration and development drilling is underway. Preliminary results have been encouraging.
- Investors' vote of confidence** – Last month's announced \$10M credit facility injection was facilitated by both Sprott Resource Lending Partnership and CEF Capital Markets Ltd. who will continue to support UEC as the company ramps production going forward. The capital will be directed primarily to the Goliad project and new production areas at Palangana.

See disclosure and a description of our recommendation structure at the end of this report.

## CONFERENCE NOTES

For the time being, in light of the weak uranium pricing environment, UEC has decided to have reduced uranium extraction from Production Units 1, 2 & 3 at Palangana and focus instead on maintaining operational readiness to ramp up output in anticipation of a recovery in uranium spot prices.

To date, production of over 500,000 lbs U<sub>3</sub>O<sub>8</sub> has been achieved at Palangana. Production areas 4 & 5 are to begin contributing to production in the near term.

Goliad remains the project next in cue for production. The project is currently fully financed & permitted. Construction is underway. Note that the current M&I resource totals 5.5M lbs, while inferred stands at 1.5M lbs (both at an ISR grade of 0.05%). Palangana had six month timeline for production ramp, Goliad is expected to fall under the same timeframe.

At Burke Hollow, initial drilling has been completed, the current mineral resource stands at 2.9m lbs inferred at an ISR grade of 0.047%. Note that approximately 70% of the 17,500 acre property remains un-explored. Additional exploration and development drilling is underway. Preliminary results have been encouraging.

UEC sees a minimum uranium price of at least \$60/lb to spur new projects in either Arizona or Paraguay.

# URANERZ ENERGY CORPORATION

Conference notes: Any day now...

## CONFERENCE HIGHLIGHT

Uranerz gave an operational update on the Nichols Ranch ISR project. It is expected to receive approval from the Nuclear Regulatory Commission any day now.

## DETAILS

Wait for it... Uranerz will soon be the newest member of a very select group of publicly traded, uranium-focused producers in the world. Moreover, Uranerz is located in the world's #1 uranium consuming country (which produces less than 10% of its domestic needs).

We are maintaining our target price to \$2.10/share and our BUY recommendation on Uranerz Energy.

## FOCUS POINTS

- **Any moment now** – The U.S. Nuclear Regulatory Commission is expected to reissue the Nichols Ranch licence to mine any day now. But as it is with any government agency, the approval will be released when it is released.
- **Select company** – Globally there are only five uranium-focused, publicly traded producers (Cameco, Paladin, Energy Fuels, Ur-Energy, and Uranium Energy Corp). Uranerz is about to join a very select group of which only three are currently based out of the U.S.
- **Compelling Fundamentals** – With the spot price of uranium trading below the global marginal cost of production and significant increases in demand coming between now and 2025 (we forecast demand of 275M lbs., an increase of 58% from 2013), Uranerz is entering production at an opportune time in the country that has the largest consumption versus production imbalance.

## Recommendation:

See disclosure and a description of our recommendation structure at the end of this report.

## CONFERENCE NOTES

The reissuance of the Nichols Ranch mining licence by the Nuclear Regulatory Commission (“NRC”) will allow Uranerz to commence production. All other necessary permits have been received.

At the Nichols Ranch processing facility, initial well field and two deep disposal wells are complete and water is currently circulating. Note that Nichols Ranch is licensed for maximum annual production levels of 2M lbs U<sub>3</sub>O<sub>8</sub> per year.

Off-take agreements have already been signed with two major U.S. operators, including Exelon, which operates the third largest nuclear fleet in the world (while being the largest in the U.S.). All agreements are long term in nature with deliveries over four to five year periods.

Moreover recall that a toll processing agreement has been previously signed with Cameco, where Cameco’s facility will process the final resin. In-house processing is seen in a few years. The current toll processing agreement has saved the company initial capital expenditures.

## VALUATION

We are maintaining our target price for Uranerz Energy to \$2.10 per share and are reiterating our BUY recommendation. Our target price represents a 1.0x multiple to our NAV<sub>10%</sub> valuation.

### Exhibit 3: Net Asset Valuation and Sensitivities

Information may be available to Cantor that is not herein.

This report is provided, for informational purposes only, to institutional investor clients of Cantor Fitzgerald Inc. Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This report is issued and approved for distribution in Canada, Cantor Fitzgerald Inc., a member of the Investment Industry Regulatory Organization of Canada ("IIROC"), the Toronto Stock Exchange, the TSX Venture Exchange and the CIPF. This report is has not been reviewed or approved by Cantor Fitzgerald USA., a member of FINRA. This report is intended for distribution in the United States only to Major Institutional Investors (as such term is defined in SEC 15a-6 and Section 15 of the Securities Exchange Act of 1934, as amended) and is not intended for the use of any person or entity that is not a major institutional investor. Major Institutional Investors receiving this report should effect transactions in securities discussed in the report through Cantor Fitzgerald USA.

**Non US Broker Dealer 15a-6 disclosure:** This report is being distributed by (CF Canada/CF Europe/CF Hong Kong) in the United States and is intended for distribution in the United States solely to "major U.S. institutional investors" (as such term is defined in Rule 15a-6 of the U.S. Securities Exchange Act of 1934 and applicable interpretations relating thereto) and is not intended for the use of any person or entity that is not a major institutional investor. This material is intended solely for institutional investors and investors who Cantor reasonably believes are institutional investors. It is prohibited for distribution to non-institutional clients including retail clients, private clients and individual investors. Major Institutional Investors receiving this report should effect transactions in securities discussed in this report through Cantor Fitzgerald & Co. This report has been prepared in whole or in part by research analysts employed by non-US affiliates of Cantor Fitzgerald & Co that are not registered as broker-dealers in the United States. These non-US research analysts are not registered as associated persons of Cantor Fitzgerald & Co. and are not licensed or qualified as research analysts with FINRA or any other US regulatory authority and, accordingly, may not be subject (among other things) to FINRA's restrictions regarding communications by a research analyst with a subject company, public appearances by research analysts, and trading securities held by a research analyst account.

### *Potential conflicts of interest*

The author of this report is compensated based in part on the overall revenues of Cantor, a portion of which are generated by investment banking activities. Cantor may have had, or seek to have, an investment banking relationship with companies mentioned in this report. Cantor and/or its officers, directors and employees may from time to time acquire, hold or sell securities mentioned herein as principal or agent. Although Cantor makes every effort possible to avoid conflicts of interest, readers should assume that a conflict might exist, and therefore not rely solely on this report when evaluating whether or not to buy or sell the securities of subject companies.

### *Disclosures as of April 8, 2014*

Cantor *has* provided investment banking services or received investment banking related compensation from Uranerz Energy Corporation within the past 12 months.

The analysts responsible for this research report *do not have*, either directly or indirectly, a long or short position in the shares or options of Uranerz Energy Corporation.

The analyst responsible for this report *has* visited the material operations of Uranerz Energy Corporation. No payment or reimbursement was received for the related travel costs.

### *Analyst certification*

The research analyst whose name appears on this report hereby certifies that the opinions and recommendations expressed herein accurately reflect his personal views about the securities, issuers or industries discussed herein.

### *Definitions of recommendations*

**BUY:** The stock is attractively priced relative to the company's fundamentals and we expect it to appreciate significantly from the current price over the next 6 to 12 months.

**BUY (Speculative):** The stock is attractively priced relative to the company's fundamentals, however investment in the security carries a higher degree of risk.

**HOLD:** The stock is fairly valued, lacks a near term catalyst, or its execution risk is such that we expect it to trade within a narrow range of the current price in the next 6 to 12 months. The longer term fundamental value of the company may be materially higher, but certain milestones/catalysts have yet to be fully realized.

**SELL:** The stock is overpriced relative to the company's fundamentals, and we expect it to decline from the current price over the next 6 to 12 months.

**TENDER:** We believe the offer price by the acquirer is fair and thus recommend investors tender their shares to the offer.

**UNDER REVIEW:** We are temporarily placing our recommendation under review until further information is disclosed.

## FISSION URANIUM CORP

Conference notes: Exploration success continues; Resource expected at year-end

### CONFERENCE HIGHLIGHT

Fission Uranium gave an exploration update on the current winter drilling program at the Patterson Lake South “PLS” property in the Athabasca Basin and gave some guidance as for what to expect for the remainder of the year.

### DETAILS

Thus far, the \$12M winter drilling delineation drilling program at PLS has completed 70 holes of the planned 30,000m program. Approximately 85% of the holes are designed to assist in delineation of the main mineralized trend between lines 015E and 1080E utilizing four diamond drill rigs. A large part of the drilling is to merge the current five zones of mineralization spread over a 2.24 km trend, into one unified, all encompassing zone.

We are maintaining our Buy (Speculative) recommendation on Fission Uranium and note that it is our top exploration pick in the hot uranium sector.

### FOCUS POINTS

- **Mineralization zones merge:** Consolidating the zones has already begun as zones R390E and R585E have recently merged to become R390E.
- **Continued exploration success:** In late March, Fission announced the best “off-scale” scintillometer result ever, totalling 53.47m total composite at shallow depth. Fission estimates that there is a further 400 km worth of electro-magnetic conductors (“EM”) on the property which would have similar properties to the currently identified mineralized zones.
- **Initial NI 43-101 resource:** Management believes that a maiden resource for the PLS zone will be available by December of this year.

**Recommendation:** BUY (Speculative)

Symbol/Exchange: FCU-TSXV, FCUUF-OTC

Sector: Metals & Mining

All dollar values in C\$ unless otherwise noted.

Current price (FCU) \$1.55

Cash on hand \$37.9M

## CONFERENCE NOTES

Thus far, the \$12M winter drilling delineation drilling program at PLS has completed 70 holes of the planned 30,000m program. Approximately 85% of the holes are designed to assist in delineation of the main mineralized trend between lines 015E and 1080E utilizing four diamond drill rigs. A large part of the drilling is to merge the current five zones of mineralization spread over a 2.24 km trend, into one unified, all encompassing zone.

In late March, Fission announced the best “off-scale” (>9999 cps) scintillometer result ever, totalling 53.47m total composite at shallow depth. Fission estimates that there is a further 400 km worth of electro-magnetic conductors (“EM”) on the property which would have similar properties to the currently identified mineralized zones.

As announced on April 7, an additional seven holes were released, each returning “off-scale” mineralization. Assays will follow afterwards. The winter drill program will conclude shortly and be followed up by the summer program which will cost \$8M and continue with the resource delineation. Management expects an initial resource for PLS by December of this year. They also estimate that a resource of between 50-60M lbs will be needed in the least to justify the construction of a mill.

## VALUATION

Below is a list of valuation sensitivities for FCU based on potential resource size and various Market Capitalization/Lb valuation metrics. Given publicly released assay results to date, we estimate a current 52M lb potential resource along with a “high end” estimate of 81M lbs.

### Exhibit 4. FCU Per Share Valuation Sensitivities

## DENISON MINES CORP.

### Conference notes: Athabasca Basin acquisitions and exploration success continue

#### CONFERENCE HIGHLIGHT

Denison Mines gave an exploration update on its projects in the Athabasca Basin and an overview on corporate strategy concerning its global uranium portfolio.

#### DETAILS

Denison's role as the consolidator of notable uranium properties in the Athabasca Basin not currently owned by a major continues. Last month Denison acquired the Mann Lake and Bachmann Lake properties from International Enenco. More importantly, drilling success continues at Wheeler River as a new high grade discovery (called the Gryphon zone) was announced.

#### FOCUS POINTS

- **Gryphon Zone:** The K trend on the Wheeler River deposit has a new discovery called Gryphon. As announced last week, a massive 17.3% U<sub>3</sub>O<sub>8</sub> intercept was hit over 4.2m. This intercept followed up an earlier announcement of 9.7% U<sub>3</sub>O<sub>8</sub> intersected over 4.6m.
- **Acquired assets:** The Mann Lake uranium project is a 3,407 Ha. property located between McArthur River and Millennium. Cameco (52.5%) and AREVA (17.5%) are IEC's (30%) partners in the project. Bachmann Lake is an 11,419 Ha. property situated adjacent to the Millennium project. IEC owned the remaining 20% not owned by Denison.
- **McClean Lake mill:** Last month it was announced that the mill has received initial shipments of Cigar Lake ore. To date, nine trucks have been received from Cameco and production of yellowcake is expected for July.
- **International assets:** Management remains focused on building up the Athabasca portfolio. Mongolian assets will likely be sold off in the months ahead.

#### Recommendation: BUY (Speculative)

See disclosure and a description of our recommendation structure at the end of this report.

## CONFERENCE NOTES

The acquisition of both Mann Lake and Bachmann Lake from International Enexco is scheduled to be complete by early June. This latest Athabasca Basin acquisition follows those of JNR Resources (7M lbs inferred, November 2012) and Waterbury Lake (13M lbs 100% basis, January 2013).

On the exploration front, Denison's total FY 2014 budget stands at \$15M. This will be spread over 20 of 43 projects in the Basin. 60,000m of total drilling is expected, of which 27,600m (52 holes) will be dedicated for the Wheeler River. \$8M alone will be allocated to the Wheeler River program (Denison's share, \$4.6M).

Note that the newly discovered Gryphon zone (9.7% U<sub>3</sub>O<sub>8</sub> over 4.6m and 17.3% U<sub>3</sub>O<sub>8</sub> over 4.2m) is located only 3.0km northwest of the very high grade Phoenix deposit.

The McClean Lake Mill expansion has begun with a capacity increase from 13M lbs to 24m lbs per year and is expected to be complete by 2016. Just recently, the mill has received initial shipments of Cigar Lake ore. Nine trucks have been received from Cameco and production of yellowcake is expected for July. Between \$6-\$8M in cash flow is expected from the mill once at full capacity. Denison has a 22.5% ownership stake in the mill.

Management mentioned that the focus is to concentrate on the assets in the Athabasca Basin while spinning out the African assets may potentially occur. (namely Mutanga in Zambia and Falea in Mali). The Mongolian asset may be sold in the next few months. Targeted strategic acquisitions remain on the table.

## VALUATION

Assuming the successful acquisition of International Enexco, we have previously adjusted Denison's share count to incorporate the all-share transaction. Since the incoming assets do not contain resources, we have conservatively ascribed zero value at this point.

**Exhibit 1. Current Denison Mines Net Asset Value**

Asset	Attributable M		Value (\$M)	Per share	Ownership

# CAMECO CORPORATION

## Conference Notes: Milestone event: Start of ore production at Cigar Lake

### CONFERENCE HIGHLIGHT

Cameco provided an operations update which was highlighted with the fact that Cigar Lake production has begun production.

### DETAILS

After years of delays and mine plan re-engineering, Cigar Lake is finally in production. All mining systems and processing circuits are operational and ore is being transported to the McClean Lake mill. By the end of Q2/14, the mill is expected to begin processing the ore into uranium concentrate.

We also maintain our Buy recommendation along with our \$32.70 per share target price.

### FOCUS POINTS

- **Growth driver** – The Cigar Lake operation will be a key production driver going forward for Cameco and is expected to be one of the largest uranium mines in the world. Peak production from Cigar Lake is expected to be 18M lbs annually.
- **McClean Lake mill** – Located 70 Km northeast of the mine site, the McClean Lake mill will be processing all the ore coming out of Cigar Lake. For FY 2014, between 2-3M lbs of uranium concentrate is expected to be produced.
- **Existing operations in focus** – Management specified that global assets such as McArthur River/Key Lake, Rabbit Lake, the U.S. ISR operations and Inkai remain in focus while projects under evaluation include Millennium, Kintyre and Yeelirrie. Additionally, given the recent divestiture of Bruce Power, the corporate focus has shifted to production and fuel services.

### Recommendation:

### BUY

Symbol/Exchange:	CCO/TSX; CCJ/NYSE
Sector:	Metals and Mining
<i>All dollar values in C\$ unless otherwise noted.</i>	
Current price	\$25.47; US\$23.11
One year target:	\$32.70
Return target	28%
Market Capitalization	\$10.1B
Cash on hand	\$229.1M
Yield	1.57%

## CONFERENCE NOTES

After years of delays, mine plan re-engineering and a total cost of \$2.6B, the world class Cigar Lake mine is finally in ore production. All mining systems and processing circuits are operational and ore is being transported to the McClean Lake mill. By the end of Q2/14, the mill is expected to process the ore into uranium concentrate. The Cigar Lake operation will be a key production driver going forward for Cameco and is expected to be one of the largest uranium mines in the world. Peak production from Cigar Lake is expected to be 18M lbs annually.

Located 70 Km northeast of the mine site, the McClean Lake mill will be processing all the ore coming out of Cigar Lake. For FY 2014, between 2-3M lbs of uranium concentrate is expected to be produced. Note that the mine itself is 50%-owned by Cameco, with the balance being owned by AREVA Resources (37%) Idemitsu Uranium Exploration Canada (8%) and TEPCO Resources (5%).

Management specified that global assets such as McArthur River/Key Lake, Rabbit Lake, the U.S. ISR operations and Inkai remain in focus while projects under evaluation include Millennium, Kintyre and Yeelirrie. Additionally, given the recent divestiture of Bruce Power, the corporate focus has shifted to production and fuel services.

FY 2014 production guidance is expected at between 23.8-24.3m lbs. while total capex for the year has been budgeted at \$495M.

In terms of pricing strategy, Cameco currently employs a 40% fixed/60% variable matrix. Going forward Cameco would be more interested in variable pricing should the pricing matrix change. Specifically, management noted that they are, "not interested" in long term contracts at current prices.

Industry-wise, Cameco still sees excess inventories in Japan and estimates that the utilities remain well stocked until 2015-2016, so at the moment there is a virtual stalemate between producers and utilities.

## VALUATION

We are maintaining our BUY rating and \$32.70 target price for Cameco based on a 14x cash flow multiple.

### Exhibit 2. Cameco NAV

Projects	Cameco Corporation		Comment
	NAV	Per Share	
Uranium, Fuel Services, Electricity and Nukem Divisions	8,745.1	\$21.84	2014 DCF @ 8% Discount Rate
Wheeler River/Millennium/Kintyre	797.4	\$1.99	In-Situ Valuations

### Potential conflicts of interest

The author of this report is compensated based in part on the overall revenues of Cantor, a portion of which are generated by investment banking activities. Cantor may have had, or seek to have, an investment banking relationship with companies mentioned in this report. Cantor and/or its officers, directors and employees may from time to time acquire, hold or sell securities mentioned herein as principal or agent. Although Cantor makes every effort possible to avoid conflicts of interest, readers should assume that a conflict might exist, and therefore not rely solely on this report when evaluating whether or not to buy or sell the securities of subject companies.

### Disclosures as of April 8, 2014

Cantor *has not* provided investment banking services or received investment banking related compensation from Cameco within the past 12 months.

The analysts responsible for this research report *do not have*, either directly or indirectly, a long or short position in the shares or options of Cameco.

The analyst responsible for this report *have* visited the material operations of Cameco. No payment or reimbursement was received for the related travel costs.

### Analyst certification

The research analyst whose name appears on this report hereby certifies that the opinions and recommendations expressed herein accurately reflect his personal views about the securities, issuers or industries discussed herein.

### Definitions of recommendations

**BUY:** The stock is attractively priced relative to the company's fundamentals and we expect it to appreciate significantly from the current price over the next 6 to 12 months.

**BUY (Speculative):** The stock is attractively priced relative to the company's fundamentals, however investment in the security carries a higher degree of risk.

**HOLD:** The stock is fairly valued, lacks a near term catalyst, or its execution risk is such that we expect it to trade within a narrow range of the current price in the next 6 to 12 months. The longer term fundamental value of the company may be materially higher, but certain milestones/catalysts have yet to be fully realized.

**SELL:** The stock is overpriced relative to the company's fundamentals, and we expect it to decline from the current price over the next 6 to 12 months.

**TENDER:** We believe the offer price by the acquirer is fair and thus recommend investors tender their shares to the offer.

**UNDER REVIEW:** We are temporarily placing our recommendation under review until further information is disclosed.
