

OUR MISSION. TO DESIGN AND MANUFACTURE MUNICIPAL AND INDUSTRIAL VACUUM TRUCKS THAT SURPASS INDUSTRY STANDARDS FOR QUALITY, ENGINEERING AND INNOVATION.

**Inovac Technologies has been created in response to the market's growing demand for environmentally friendly industrial systems. Inovac vacuum trucks and other custom industrial systems feature our unique Smart Enclosure © system design:**

- sophisticated acoustic attenuation systems at sound levels under 85 dBA (measured at one meter from enclosure);
- high heat rejection capability;
- superior equipment accessibility and protection resulting in low maintenance costs;
- exclusive ergonomic and safety features;
- high end protection and control systems;
- unrivalled reliability and aesthetics;
- custom design of industrial vehicles;
- vehicle upgrade and maintenance;
- 25 years experience in mastering vacuum and pressure machines and systems.

**Entirely reengineered: Inovac Technologies has redesigned the vacuum truck in order to make it more reliable, easier to maintain, user friendly and most of all, extremely quiet. Inovac has brought "noise reduction" to another level. As a result of this technology, your Inovac vacuum truck will feature the following:**

- The lowest sound level in the industry (under 85 dBA, measured at one meter from enclosure), thus providing:
  - extended operating hours;
  - undisturbed residential areas;
  - environmentally friendly, less invasive working methods;
  - better work conditions.
- Very little downtime as the equipment is conveniently accessible and easily maintained.
- Unparalleled service: Inovac understands that repairing damaged equipment in a timely manner can make a difference to a company striving to meet commitments. Service and repair facilities are keys to successful customer service.

Another part of Inovac's work is the design and manufacturing of custom-designed industrial systems. We handle the project from the requirements phase, through determining the optimum machine architecture, to setting up your process on site.

We can provide our clients with totally flexible customized solutions. This includes:

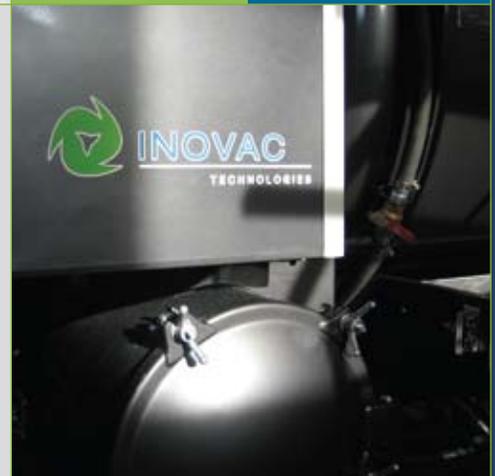

- Assisting you in defining your requirements;
- Providing system design alternatives;
- Engineering and manufacturing custom machinery;
- Integrating standard, "off the shelf" equipment;
- Designing and manufacturing control and protection systems.

### Our Long Term Commitment

In our experience, customers appreciate and value a systems provider that is committed to a long-lasting relationship; to working together with the plant and engineering personnel on an ongoing basis to identify cost-saving opportunities and implement them.

We believe that the best way to demonstrate our commitment to you is by being there to help you after the project is complete, providing training and ongoing product assistance. We stand behind the quality of our products and are committed to outstanding post-sale technical service and support.
